

FUTURE COOPERATION IN PALM BIOFUEL- BIODIESEL INDUSTRIES

- Almost all the countries in the world are committed to taking action to reduce the emission due to the Paris agreement's further actions.
- We must accelerate the energy transition towards the net zero emissions
- Definitely we, the tropical countries have a big opportunity to take advantage of our superiority in the tropical plant to reduce the emission in the form of sustainable Biofuel-Biodiesel. Also, to maximize the Oil Palm into the energy.
- Developing the Biodiesel downstream product is necessary.
- To bolster and energize the sustainable Palm Biofuel-Biodiesel, we must work together to make the synergies among us.
- We propose to strengthen the communication by holding twice a year meeting (Palm Biofuel-Biodiesel Meeting Working Group under the CPOPC).
- **We, Indonesia, are ready to host the first meeting in 2022.**
